Election/Restrictions

1. Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 17, 24, 25, 27-32, 35, 37-39, 41, 49, 52, 63, 64, 67 and 68 are, directed to the species of claim 1, are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

While prior art such as Raymonds et al., Helmer et al. and Charleux et al. teach emulsion polymerization processes comprising aqueous polymerization of monomers in the presence of control agents and in-situ generated emulsifiers, the emulsifiers taught in the prior art are generated from compounds that themselves, qualify as emulsifiers, and are therefore not "latent emulsifiers".

Absent from the prior art is the teach or suggestion of using an in-situ generated emulsifiers from the combination a "latent surfactant" and a "surfactant activator".

As defined by applicant, "the term 'latent surfactant' refers to a compound or mixture of compounds that:

- (i) is soluble in a monomer-containing solution that is not miscible with water; and
- (ii) is not independently capable of producing a stabilized colloidal micro-emulsion at conventional surfactant levels from simple gentle mixing of the compound or mixture of compounds with monomer-containing solution and water." (see page 26 of spec.)

As defined by applicant, "the term 'surfactant activator' is ... a compound or mixture of compounds that:

- (i) is soluble in water; and
- (ii) is not independently capable of producing a stabilized colloidal micro-emulsion at conventional surfactant levels from simple gentle mixing of the compound or mixture of compounds with monomer-containing solution and water." (see page 26 of spec.)

Since none of the prior art was found to teach this process, claims 1-32, 34-55, 62-64 and 66-68 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
